DK050 Docking Station: Iridium 9555

Quick Start Guide

Please read before deployment

Step 1: Remove Protective Antenna Socket Plug

Before docking your 9555 Handset, it is **IMPERATIVE** that you remove and discard the rubberized packing plug from the antenna connector hole on the rear of the handset as shown below. Held in by only a friction fit, the plug can be easily removed using a small screwdriver.

IMPORTANT: Failure to remove this plug may damage the docking station's antenna connector.

Step 2: Configure the Handset

Prior to docking, confirm the following settings on your Iridium 9555 handset:

1. SIM card is installed and unlocked (PIN code prompt turned off). Refer to your 9555 handset documentation for instructions.
2. The 9555 handset firmware must be version HT09007 or greater (but excluding HT09014) for proper operation in the docking station. Confirm by verifying under Phone Setup in the handset documentation.

NOTE: Iridium antenna location and cable lengths are critical for successful installation and operation. Refer to the user guide for more information.

Docking the Handset

1. Install the docking station in desired location. Connect power and interface cables to the connectors on the bottom of the device. The antenna connector is at the top and accepts a male TNC. See user guide for typical antenna cable types and their maximum lengths.
2. Remove antenna plug from handset (see Step 1 on previous page).
3. Rotate the secure lock to the left to open.
4. Align the bottom of the 9555 handset with the docking station connector.
5. Press down slightly while rotating and seating the handset into the dock.
6. Rotate the secure lock to the right to lock the handset in place.

Step 3

Step 4

Step 5

Step 6

Undocking the Handset

To undock, simply rotate the secure lock to the left and remove the handset.
